

FALL 2020 SYLLABUS
Structure & Formation of Terrestrial Planets: 3 credits
(cross-listed as 460:506 and 460:441)

Instructors

Professor Katherine R. Bermingham katherine.bermingham@rutgers.edu and Professor Vadim Levin vadim.levin@rutgers.edu, Department of Earth and Planetary Sciences.

Due to the global pandemic this course will be taught using remote means **ONLY**.

ALL communications with instructors will utilize email and teleconferencing tools (WebEx or Zoom). Prior to the first class, electronic invites will be sent to registered students. During the first class, instructors will review the teleconferencing tools that will be used and answer student questions about the on-line format of the class.

A weekly online “office hours” time will be selected at the beginning of the class to make it most convenient for all participants.

All course materials will be hosted by the **CANVAS** learning management system.

Course Description

The solid Earth has an internal structure that consists of well-organized lithological and chemical parts that have been identified by seismological and petrological observations. Many of the physical characteristics of the Earth’s interior are also expected to exist within other terrestrial planets. This course will review current understanding of planetary formation processes, planetary compositions, observations reflecting interior structure, and hypotheses of planetary evolution in the solar system.

Outline

Course meets once a week for 3 hours (2 periods):

- Mondays, between hours of 1:40 pm and 4:20 pm
 - 1 period devoted to presentation and discussion of the fundamentals of the topic being studied (instructors leading)
 - 1 period devoted to seminar-style discussion of assigned reading (students leading).
- Tentative schedule at the end of the syllabus – to be adjusted to reflect student interests and new developments in the field.

Prerequisites

01:460:302 (Petrology), 01:460:304 (Intro to Geochemistry), 01:460:306 (Intro to Geophysics) or permission of instructor. And also note that credit IS NOT given for both this course and 16:460:506.

Text

None, readings assigned from current peer-reviewed literature to be disseminated via CANVAS.

Learning Goals

Students will be introduced to the current state of knowledge about the processes underlying the formation and evolution of rocky planets in the Solar System. Students will:

- a) Learn the methods used to investigate interiors of solid/rocky planets and develop an understanding of their inherent limitations;
- b) acquire a working knowledge of the interior properties of terrestrial planets and, most importantly,
- c) develop a familiarity with outstanding

FALL 2020 SYLLABUS
Structure & Formation of Terrestrial Planets: 3 credits
(cross-listed as 460:506 and 460:441)

research questions in the field. Students will have an opportunity to critique published results and practice discussing complex multidisciplinary research problems.

Assessment

Student performance will be evaluated on the basis of weekly in-class presentations, general course participation and an end-of-term written/oral presentation project on the subject of an outstanding research topic.

- 30% class participation: This part of the grade consists of regular attendance and turning in two questions about each paper assigned to read. Students with excused absences must make arrangements with the instructors for make-up work.
- 20% student-led presentation of at least 2 research papers over the course of the semester (creating a PowerPoint describing the background, methods, outcomes, and implications of the paper, as well as leading the class in discussion of the paper).
- 20% final review paper (for undergraduates) or research proposal (for graduate students) – details to be provided in class.
- 20% 2 homework assignments.
- 10% in-class presentation of final project.

Basis for grade

A: 90-100; B+: 85-90; B: 80-85; C+: 75-80; C: 70-75; D: 60-70; F: <60.

Course Policies

The rules related to exams, attendance, and integrity are provided below and are supplemented by Rutgers University policies.

Exams & Quizzes: Exams and quizzes must be taken as scheduled, otherwise a failing grade will be given. Exceptions are limited to officially verified emergencies that prohibit participation in assessment, or instructor preapproved request (such as school-sanctioned athletic matches or religious observances) to reschedule. Rare cases of extreme emergency preventing timely communication are to be discussed with the Undergraduate Director and/or Department Chair.

Attendance: All students must attend all classes, arrive on time, remain in class until the end of the class period, and participate in class discussions. Instructors may require signed attendance sheets and may count attendance as part of the grade. Reasonable accommodations for excused absences (as defined by Rutgers University policy) will be provided where appropriate. For an absence to be excused, timely notification is required via official Rutgers University communication portals. Cell phones must be turned off in class. If policy is not adhered to, you will be asked to leave and be deducted grade points.

Communication: As per Rutgers University policy, all out-of-class communication must be conducted via your official Rutgers email and/or Canvas. You will be able to view your scores for quizzes and exams on Canvas.

FALL 2020 SYLLABUS
Structure & Formation of Terrestrial Planets: 3 credits
(cross-listed as 460:506 and 460:441)

Academic Integrity: Our department endorses a no-tolerance cheating and plagiarism policy. If you are caught cheating, the instructor may fail you and request disciplinary action.

Attitude and behavior: As per Rutgers University policy, instructors and students must display the appropriate respect and consideration for each other and the pursuit of knowledge at the university level. If not, individuals will be dismissed from the course with a failing grade.

Your Rights: We are all human and instructors and students both make mistakes. If you feel that you have been treated unfairly, contact the Undergraduate Program Director or Department Chair.

Student Wellness Services <http://codu.co/cee05e>

Access helpful mental health information and resources for yourself or a friend in a mental health crisis on your smartphone or tablet and easily contact CAPS or RUPD.

Counseling, ADAP & Psychiatric Services (CAPS) (848) 932-7884 / 17 Senior Street, New Brunswick, NJ 08901 <http://health.rutgers.edu/medical-counseling-services/counseling/>

CAPS is a University mental health support service that includes counseling, alcohol and other drug assistance, and psychiatric services staffed by a team of professional within Rutgers Health services to support students' efforts to succeed at Rutgers University. CAPS offer a variety of services that include individual therapy, group therapy and workshops, crisis intervention, referral to specialists in the community and consultation and collaboration with campus partners.

Violence Prevention & Victim Assistance (VPVA) (848) 932-1181 / 3 Bartlett Street, New Brunswick, NJ 08901 www.vpva.rutgers.edu/

The Office for Violence Prevention and Victim Assistance provides confidential crisis intervention, counseling and advocacy for victims of sexual and relationship violence and stalking to students, staff and faculty. To reach staff during office hours when the university is open or to reach an advocate after hours, call 848-932-1181.

Disability Services (848) 445-6800 / Lucy Stone Hall, Suite A145, Livingston Campus, 54 Joyce Kilmer Avenue, Piscataway, NJ 08854 <https://ods.rutgers.edu/>

The Office of Disability Services works with students with a documented disability to determine the eligibility of reasonable accommodations, facilitates and coordinates those accommodations when applicable, and lastly engages with the Rutgers community at large to provide and connect students to appropriate resources.

Scarlet Listeners (732) 247-5555

FALL 2020 SYLLABUS
Structure & Formation of Terrestrial Planets: 3 credits
(cross-listed as 460:506 and 460:441)

T E N T A T I V E S C H E D U L E

Week 1 (September 8, [Rutgers-designated](#) Monday schedule on Tuesday):

Overview of the class format, topics, survey of participants' interests, logistics

Period 1: Class organization

Bermingham and Levin

Period 2: Paper review examples done by instructors

Bermingham and Levin

- Levin presents *Kruijer et al. (2017) PNAS*
- Bermingham presents *Levin et al., 2020 Geology*
- 2 papers on planetary accretion will be assigned for the following week

Week 2 (September 14): Planetary formation I

Period 1: Lecture: The solar nebula and planetary accretion

Bermingham

- **Homework #1 assigned.**

Period 2: Discussion of papers on planetary accretion

Bermingham and Levin

- 2 papers on the formation of the Earth will be assigned for the following week

Week 3 (September 21): Planetary formation II

Period 1: Lecture: Formation of Earth's internal structure and late-stage accretion

Bermingham

- 2 papers on the late-stage accretion of the Earth will be assigned for the following week

Period 2: Discussion of papers on the formation of the Earth

Bermingham and Levin

Week 4 (September 28): Planetary cores

Period 1: Lecture: Sizes and compositions of planetary cores, stressing observational evidence for their existence, Earth's core prominently featured.

Levin

- **Homework #1 DUE.**
- 2 papers on planetary cores will be assigned for the following week

Period 2: Discussion of papers on the late-stage accretion of the Earth

Bermingham and Levin

Week 5 (October 5):

Period 1: Lecture: Planetary mantles (mostly *this planet...*)

Levin

- 2 papers on the elements of the Earth's mantle structure will be assigned for the following week

Period 2: Discussion of papers on planetary cores

Levin

FALL 2020 SYLLABUS
Structure & Formation of Terrestrial Planets: 3 credits
(cross-listed as 460:506 and 460:441)

Week 6 (October 12): Earth's mantle – not simply layered?

Period 1: Short-lived radioactive isotopes and primordial isotope anomalies in the mantle.

Birmingham

- 2 papers will be assigned on isotopic systems in the mantle

Period 2: Discussion of papers on elements of Earth's mantle structure

Levin

- **Homework #2 assigned.**

Week 7 (October 19): Lithosphere I

Period 1: Lecture: Oceanic lithosphere – a “normal” outer shell for a rocky planet.

Levin

- 2 papers on the lithosphere on rocky planets

Period 2: Discussion of papers on isotopic systems in the mantle

Birmingham

Week 8 (October 26): Lithosphere II

Period 1: Lecture: Earth's special continents

Levin

Assign two papers on the nature/structure/origin of Earth's continents

Period 2: Discussion of papers on “oceanic” lithospheric structure

Levin

- **Homework #2 DUE.**

Week 9 (November 2): Mantle evolution I

Period 1: Lecture: Mantle convection – should it happen? Can we “see” it?

Levin/Birmingham

- 2 papers on mantle convection in rocky planets

Period 2: Discussion of papers on the nature/structure/origin of Earth's continents

Levin

Week 10 (November 9): Mantle evolution II

Period 1: Mantle convection – should it happen? Can we “see” it?

Levin/Birmingham

- 2 papers on mantle convection in rocky planets

Period 2: Discussion of papers on mantle convection

Levin/Birmingham

Week 11 (November 16): Open slot for improvisation.

Week 12 (November 23): Planetary space missions

Period 1: TBD

Birmingham/Levin

Period 2: TBD

Birmingham/Levin

FALL 2020 SYLLABUS
Structure & Formation of Terrestrial Planets: 3 credits
(cross-listed as 460:506 and 460:441)

MONDAY AFTER THANKSGIVING - NO CLASS??

Week 13 (December 7): Student-led workshop on outstanding questions in the field
Period 1 & Period 2
